SUMMARY

Frontend-leaning full-stack engineer. I build the difficult surfaces in creative and developer tools—drawing canvases, live editors, storyboard workspaces, and agent panels—and usually own them from the data model through to the screen.

EXPERIENCE

StashBase **Jul 2026 – Present**
Open Source Contributor (53 merged PRs) *Remote*

- Built the live Markdown editor for a local-first knowledge base on Milkdown Crepe, unifying editing and preview in one surface without losing source fidelity, with sanitized HTML rendering, Quick Open, and a command palette.
- Built inline review of Agent edits: readers keep or undo each change inside the document, and a host-side snapshot at the turn boundary records what every Claude, Codex, or OpenCode turn changed, shell writes included.
- Wrote the Shared Agent Contract with Claude and Codex adapters and parity tests across both, and set up the Playwright E2E suite against the real Electron app, with cross-platform CI gates.

SamurAI Studios **Apr 2026 – Jul 2026**
Software Engineer *Remote*

- Built the creative-brief pipeline that turns a client deck into a typed brief: deck ingestion, keyframe extraction, visual captioning, and per-stage evidence an operator console can inspect.
- Rebuilt storyboards from project-owned to scene-owned across the stack: schema migration, scene-scoped APIs, version history with snapshot restore, and a multi-scene frontend workspace, without breaking existing projects.
- Shipped per-beat image and video generation across four model providers, with continuity prompts to hold style between shots, run monitoring, and usage logging.
- Moved the UI onto shared primitives and Tailwind CSS v4 tokens, and optimized gallery image formats.

fiddle-factory **Dec 2025 – Apr 2026**
Software Engineer (Contractor) *Remote*

- Traced a hydration race that left every new user with a blank canvas: tldraw mounted before a cold React Query fetch resolved, so I gated the editor mount on data readiness.
- Added auto-pan to new shapes, a visual component picker in place of a text-only mention menu, and preview theme switching driven by the user's own repository.
- Set up Storybook across four repositories with stories for all 56 shared primitives, and replaced runtime iframe capture with Storycap screenshots of static builds.
- Added PKCE auth, verified magic links, and allowlist access to the dashboard; made chat sends optimistic and added Claude pre-flight health checks.

fiddle-factory **May 2025 – Aug 2025**
Software Engineer Intern *Remote*

- Migrated the canvas from react-flow to tldraw: custom shapes and tools per component type, preview renderers, and converters that carried existing documents between two canvas models.
- Moved cloud sandboxes from StackBlitz WebContainers to e2b for reliable installs, and built the "make real" flow that turns a canvas drawing into a generated component.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript
Frameworks: React 19, Next.js 15, Node.js, Tailwind CSS 4
Libraries & Tools: shadcn/ui, Radix UI, Framer Motion, Zustand, Storybook, tldraw
Databases: PostgreSQL, Supabase
DevOps & Tooling: Git, GitHub Actions, CI/CD, Linux, Bun, Vercel
Concepts: REST APIs, OAuth/PKCE, Component Architecture, Performance Optimization

PROJECTS

trove/cn | Next.js, React, TypeScript, Tailwind CSS **2026 – Present**

- Rebuilt 30+ UI patterns from real products as copyable React source, installable one at a time via the shadcn CLI.
- Includes agent UI patterns (prompt composer, tool runs, approval requests, plan checklists), all with live previews.

EDUCATION

National Institute Of Technology Durgapur **2022 – 2026**
B.Tech - Mechanical Engineering *Durgapur, West Bengal*
